

Refrigerated Air Dryer

For use in Europe, Asia and Oceania

EC Directive compliant (with CE marking)

Power supply voltage:
Single-phase 230 VAC (50 Hz)

Series **IDFA□E**

Refrigerant **R134a(HFC)**
R407C(HFC)

Coefficient of destruction
for ozone is zero.

Improved corrosion resistance with
the use of stainless steel, plate type
heat exchanger (IDFA4E to 75E)

New
IDFA55E, 75E
are added!

Series IDFA□E

Model Selection

The corrected air flow capacity, which considers the user's operating conditions, is required for selecting the air dryer. Please select using the following procedures.

1 Read the correction factor.

Obtain the correction factor A to D suitable for your operating condition using the table below.

2 Calculate the corrected air flow capacity.

Obtain the corrected air flow capacity from the following formula.
Corrected air flow capacity = Air consumption ÷ (Correction factor A x B x C)

3 Select the model.

Select the model which air flow capacity exceeds the corrected air flow capacity using the specification table. (For air flow capacity, refer to the data D below.)

4 Option

5 Finalise the model number.

6 Select accessories sold separately.

IDFA E Selection Example

Condition	Data symbol	Correction factor ^{Note)}
Inlet air temperature	40°C	A
Ambient temperature	35°C	B
Inlet air pressure	0.5 MPa	C
Air consumption	31 m ³ /h	—

Note) Values obtained from the table below.

$$\text{Corrected air flow capacity} = 31 \text{ m}^3/\text{h} \div (0.83 \times 0.83 \times 0.92) = 48.9 \text{ m}^3/\text{h}$$

According to the corrected air flow capacity of 48.9 m³/h, the **IDFA8E** will be selected when the required output air pressure dew point is 3°C. The **IDFA6E** will be selected when the required pressure dew point is 10°C.

Refer to page 3, 6.

Refer to page 3, 6.

Refer to page 11.

Auto drain replacement parts no. <small>Note 5)</small>	AD38		AD48			

Note 6) The part number for the auto drain components without including the body part.

Body part replacement is impossible.

Construction (Air/Refrigerant Circuit)

Humid, hot air coming into the air dryer will be cooled down by a cooler re-heater (heat exchanger). Water condensed at this time will be removed from the air by auto drain and drained out automatically. Air separated from the water will be heated by a cooler re-heater (heat exchanger) to obtain the dried air, which goes through to the outlet side.

Series IDFA□E

Options 1

For “How to Order” optional models, refer to page 3 and 6.

A Option symbol

Cool compressed air output IDFA3E to 11E

There is no heating of cooled, dehumidified air as it leaves the air dryer. The air flow capacity with this option is smaller than that of the standard dryer. (The external dimensions are identical to the standard product.)
 (Note) Perform thermal insulation treatment to the piping and equipment installed after the dryer to prevent the formation of condensation.

Air Flow Capacity

Model	IDFA3E	IDFA4E	IDFA6E	IDFA8E	IDFA11E
Air flow capacity m ³ /h (ANR)	18	23	29	32	39

Conditions: Inlet air pressure: 0.7 MPa, Inlet air temperature: 35°C,
 Outlet air temperature: 10°C Ambient temperature: 25°C

C Option symbol

Anti-corrosive treatment IDFA all models

This minimises the corrosion of the copper and copper alloy parts when the air dryer is used in an atmosphere containing hydrogen sulfide or sulfuric acid gas. (Corrosion cannot be completely prevented.)
 Special epoxy coating: Copper tube and copper alloy parts.
 The coating is not applied on the heat exchanger or around electrical parts, as operation may be affected by the coating.
 * Corrosion is not covered under warranty.

K Option symbol

For 1.6 MPa applications (Auto drain bowl type: Metal bowl with level gauge) IDFA6E to 37E

The auto drain is changed from the standard one to one with a medium pressure specification. A metal bowl with a level gauge which can confirm the water level is used for the auto drain.

Specifications

1. Maximum operating pressure: 1.6 MPa
2. Dimensions ... same as standard products

Replacement Parts

Model	Auto drain assembly part no.	Note
IDFA6E to 15E	IDF-S0086	The AD48-8-X2110 auto drain, insulator, and one-touch fitting are included.
IDFA22E, 37E	AD48-8-X2110	Single auto drain unit

L Option symbol

With heavy duty auto drain (Applicable to 1.6 MPa) IDFA4E to 75E

The float type auto drain used in the standard air dryer is replaced with a heavy duty auto drain (ADH4000-04) which enables the drainage to discharge more efficiently.

Dimensions (mm)

Model	A
IDFA4E	55
IDFA6E	67

	IDFA75E-23	20 A	

T Option symbol

With terminal block for power supply, run & alarm signal and remote operation IDFA4E to 75E

In addition to the terminals for the power supply, terminals for the operating signal and the error signal are also available. (No-voltage contact)

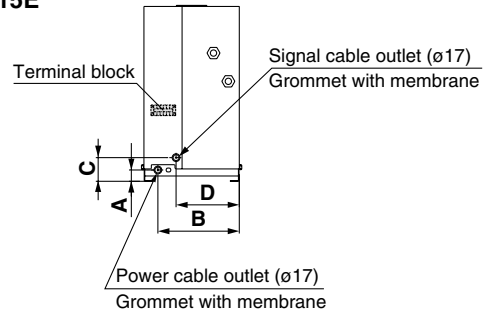

Also, in the case of remote control, operate it from the power supply side while the air dryer switch remains ON.

Contact capacity: 230 VAC, 4 A 24 VDC, 5 A for operating and error signals.

Minimum current value: 20 V, 5 mA (AC/DC) for operating and error signals.

Note) Please be sure to confirm the electric circuits with the drawings or instruction manual before using the output signal.

V Option symbol

With timer-type solenoid valve (Applicable to 1.6 MPa) IDFA4E to 75E

Drainage is discharged by controlling a solenoid valve with a timer. A strainer for solenoid valve protection and stop valve are also included.

Maximum operating pressure: 1.6 MPa

* The timer-type solenoid valve actuates once (for 0.5 s) every 30 s.

Replacement Parts

Condensed Water Calculation

How to calculate the amount of condensed water
 Example) To obtain the amount of condensed water when the inlet air of a compressor is pressurized to 0.7 MPa then cooled down to 25°C. Given an ambient temperature of 30°C and a relative humidity of 60%.

Dew Point Conversion Chart

How to read the dew point conversion chart
 Example) To obtain the atmospheric dew point at a pressure dew point of 10°C, and a pressure of 0.7 MPa.

- Trace the arrow mark from point A of ambient temperature 30°C to obtain the intersection B on the curved line for the relative humidity of 60%.
- Trace the arrow mark from the intersection B to obtain the intersection D on the curved line for the 0.7 MPa pressure characteristics.
- Trace the intersection D to obtain the intersection E.
- The intersection E is the pressure dew point at 0.7 MPa with an ambient temperature of 30°C and a relative humidity of 60%. The value for E is at 62°C.
- Trace the intersection E upward to D and leftward to obtain the intersection C on the vertical line.
- The intersection C is the amount of water which is included in the compressed air 1 m³ at 0.7 MPa, a pressure dew point of 62°C. The amount of water is 18.2 g/m³.
- Trace the arrow mark from F (cooling temperature 25°C (pressure dew point 25°C)) to obtain the intersection G on the pressure characteristic line for 0.7 MPa.
- From the intersection G, trace the arrow mark to obtain the intersection H on the vertical line.
- The intersection H is the amount of water which is included in the compressed air 1 m³ at 0.7 MPa, pressure dew point of 25°C. The amount of water is 3.0 g/m³.
- Therefore, the amount of condensed water is as following. (per 1 m³)
 The amount of water at the intersection C
 – the amount of water at the intersection H
 = the amount of condensed water
 18.2 – 3.0 = 15.2 g/m³

Series IDFA□E

Safety Instructions

These safety instructions are intended to prevent a hazardous situation and/or equipment damage. These instructions indicate the level of potential hazard by labels of "Caution", "Warning" or "Danger". To ensure safety, be sure to observe ISO 4414 ^{Note 1)}, JIS B 8370 ^{Note 2)} and other safety practices.

■ Explanation of the Labels

Labels	Explanation of the labels
 Danger	In extreme conditions, there is a possible result of serious injury or loss of life.
 Warning	Operator error could result in serious injury or loss of life.
 Caution	Operator error could result in injury ^{Note 3)} or equipment damage. ^{Note 4)}

Note 1) ISO 4414: Pneumatic fluid power – General rules relating to systems

Note 2) JIS B 8370: General Rules for Pneumatic Equipment

Note 3) Injury indicates light wounds, burns and electrical shocks that do not require hospitalization or hospital visits for long-term medical treatment.

Note 4) Equipment damage refers to extensive damage to the equipment and surrounding devices.

■ Selection/Handling/Applications

1. The compatibility of the pneumatic equipment is the responsibility of the person who designs the pneumatic system or decides its specifications.

Since the products specified here are used in various operating conditions, their compatibility for the specific pneumatic system must be based on specifications or post analysis and/or tests to meet the specific requirements. The expected performance and safety assurance are the responsibility of the person who has determined the compatibility of the system. This person should continuously review the suitability of all items specified, referring to the latest catalog information with a view to giving due consideration to any possibility of equipment failure when configuring a system.

2. Only trained personnel should operate pneumatically operated machinery and equipment.

Compressed air can be dangerous if handled incorrectly. Assembly, handling or repair of the systems using pneumatic equipment should be performed by trained and experienced operators. (Understanding JIS B 8370 General Rules for Pneumatic Equipment, and other safety rules are included.)

3. Do not service machinery/equipment or attempt to remove components until safety is confirmed.

1. Inspection and maintenance of machinery/equipment should only be performed once measures to prevent falling or runaway of the driven objects have been confirmed.
2. When equipment is removed, confirm the safety process as mentioned above. Turn off the supply pressure for this equipment and exhaust all residual compressed air in the system, and release all the energy (liquid pressure, spring, condenser, gravity).
3. Before machinery/equipment is restarted, take measures to prevent quick extension of a cylinder piston rod, etc.

4. If the equipment will be used in the following conditions or environment, please contact SMC first and be sure to take all necessary safety precautions.

1. Conditions and environments beyond the given specifications, or if the product is used outdoors.
2. Installation on equipment in conjunction with atomic energy, railway, air navigation, vehicles, medical equipment, food and beverages, recreation equipment, emergency stop circuits, clutch and brake circuits in press applications, or safety equipment.
3. An application which has the possibility of having negative effects on people and/or property, requiring special safety analysis.
4. If the products are used in an interlock circuit, prepare a double interlock style circuit with a mechanical protection function for the prevention of a breakdown. And, examine the devices periodically whether they function normally or not.

■ Exemption from Liability

1. SMC, its officers and employees shall be exempted from liability for any loss or damage arising out of earthquakes or fire, action by a third person, accidents, customer error with or without intention, product misuse, and any other damages caused by abnormal operating conditions.

2. SMC, its officers and employees shall be exempted from liability for any direct or indirect loss or damage, including consequential loss or damage, loss of profits, or loss of chance, claims, demands, proceedings, costs, expenses, awards, judgments and any other liability whatsoever including legal costs and expenses, which may be suffered or incurred, whether in tort (including negligence), contract, breach of statutory duty, equity or otherwise.

3. SMC is exempted from liability for any damages caused by operations not contained in the catalogues and/or instruction manuals, and operations outside of the specification range.

4. SMC is exempted from liability for any loss or damage whatsoever caused by malfunctions of its products when combined with other devices or software.

Series IDFA□E

Specific Product Precautions 1

Be sure to read this before handling. For Air Preparation Equipment Precautions, refer to “Precautions for Handling Pneumatic Devices” (M-03-E3A).

Installation

⚠ Caution

- Avoid locations where the air dryer will be in direct contact with wind and rain. (Places where relative humidity is greater than 85%)
- Avoid exposure to direct sunlight.
- Avoid locations that contain much dust, corrosive gases, or flammable gases. Failure due to corrosion is not covered under warranty. However, when the risk of corrosion is high, select “Option C” (copper tubing with anti-corrosive treatment).
- Avoid locations with poor ventilation and high temperature.
- Leave sufficient room between the dryer and the wall according to the “Maintenance space” in the operation manual.
- Avoid locations where a dryer could draw in high temperature air that is discharged from an air compressor or other dryer.

The air exhaust should not flow into the neighboring equipment. (Top side)

- Avoid locations subjected to vibration.
- Avoid possible locations where the drain can freeze.
- Use the air dryer with an ambient temperature lower than 40°C.
- Avoid installation on machines for transporting, such as trucks, ships, etc.

Drain Tube

⚠ Caution

- A polyurethane tube is attached as a drain tube for the IDFA3E to 75E. Use this tube to discharge drainage.
- Do not use the drain tube in an upward direction. Do not bend or crush the drain tube. (Operation of the auto drain will stop water vapour from discharging through the air outlet.)

Power Supply

⚠ Caution

- Connect the power supply to the terminal block.
- Install a suitable circuit breaker applicable for the specific model.
- The voltage fluctuation should be maintained within $\pm 10\%$ of the rated voltage.

Air Piping

⚠ Caution

- Be careful to avoid an error when connecting the air piping to the compressed air inlet (IN) and outlet (OUT).
- Install by-pass piping since it is needed for maintenance.

IDFA3E

IDFA4E to 15E

IDFA22E, 37E

Series IDFA□E

Specific Product Precautions 2

Be sure to read this before handling. For Air Preparation Equipment Precautions, refer to “Precautions for Handling Pneumatic Devices” (M-03-E3A).

Air Piping

⚠ Caution

IDFA55E, 75E

Compressed air outlet Compressed air inlet

- When tightening piping to the air inlet/outlet tube, the hexagonal parts of the port on the air dryer side or piping should be held firmly with a spanner or an adjustable angle wrench.
- Variations in the operating conditions may cause condensation to form at the surface of the outlet piping. Apply thermal insulation around the piping to prevent condensation from forming.
- Vibration resulting from the compressor should not be transmitted through the air piping to the air dryer.
- Do not allow the weight of the piping to lie directly on the air dryer.

Protection Circuit

⚠ Caution

When the air dryer is operated under the following stated conditions, a protection circuit is activated, the light turns off and operation stops.

- When the compressed air temperature is too high.
- When the compressed air flow rate is too high.
- When the ambient temperature is too high. (40°C or higher)
- When the fluctuation of the power supply is beyond the rated voltage $\pm 10\%$.
- When the dryer is drawing in high temperature air that is discharged from an air compressor or other dryer.
- The ventilation port is obstructed by a wall or clogged with dust.

Compressor Air Delivery

⚠ Caution

Use an air compressor with an air delivery of 100 l/min or larger with the IDFA3E to 75E series.

Since the auto drain of the IDFA3E to 75E is designed in such a way that the valve remains open unless the air pressure rises to 0.15 MPa or higher, air will blow out from the drain discharge port at the time of air compressor start-up until the pressure increases. Therefore, if an air compressor has a small air delivery, the pressure may not be sufficient.

Auto Drain

⚠ Caution

The auto drain may not function properly, depending on the quality of the compressed air. Check the operation once a day.

Cleaning of Ventilation Area

⚠ Caution

Remove dust from the ventilation area once a month using a vacuum cleaner or an air blow nozzle.

Time Delay for Restarting

⚠ Caution

Allow at least three minutes before restarting the dryer. If the air dryer is restarted within three minutes after being stopped, the protection circuit will be activated, operating light will turn off and the dryer will not be activated.

Record of changes

- **B edition** * Addition of Refrigerated Air Dryer, IDFA55E, 75E.
- * Options on page 3 and 6: Addition of “with timer-type solenoid valve”.
- * Number of pages 16 to 20.

LT

Air Dryers for Use in Japan

Complies with CFC restrictions **Refrigerated Air Dryer** Series **IDF**

Standard temperature air inlet type

Rated inlet air temperature:
35, 40°C

Model	Rated inlet condition	Air flow capacity (m ³ /min [ANR])		Applicable air compressor (kW)	Refrigerant	Port size

Air Dryers Compliant to Overseas Standards

Refrigerated Air Dryer Series *IDFB□E*

For use in North, Central & South America

UL certified

Power supply voltage:
Single-phase 115 VAC (60 Hz)
 230 VAC (60 Hz)
Three-phase 460 VAC (60 Hz)

Refrigerant: R134a (HFC), R407C (HFC)

Coefficient of destruction for ozone is zero.

Improved corrosion resistance with the use of stainless steel, plate type heat exchanger
 (IDFB4E to 75E)

Series	Air flow capacity SCFM (m ³ /h [ANR])			Refrigerant	Rated inlet condition	Port size	Voltage (at 60 Hz)

* See separate catalogue for dryer models conforming with North American standards (UL).

Related Products

Membrane Air Dryer *Series IDG*

Dew point indicator for checking the air drying condition at a glance

(Except IDG1)
(The IDG3, IDG5, IDG3H, IDG5H are semi-standard.)

- Compact
- Lightweight
- Space-saving

Fitting for discharging purge air available

Purge air can be discharged with a tube as it should not be discharged around the membrane air dryer (semi-standard).

Discharged air noise reduced with built-in silencer

[Except IDG1, IDG3, IDG3H, IDG5, IDG5H, IDG30, IDG30H, IDG30L, IDG50, IDG50H, IDG50L]

**CFC free:
Environmentally friendly**

No need of a power supply

A power supply is not necessary at all. This saves time and effort for wiring, and there is no need to consider electrical standards.

No vibration nor heat discharge

No mechanically moving parts such as in a refrigerator.

Suitable for a low dew point

Outlet air atmospheric pressure dew point: -40°C
[IDG30L, IDG50L, IDG60L]
[IDG75L, IDG100L]

Outlet air atmospheric pressure dew point: -60°C
[IDG60S, IDG75S, IDG100S]

**Outlet air flow rate
10 to 1000 ℓ/min (ANR)**

Heatless Air Dryer *Series ID*

Heatless type ID series is ideal for applications that require dry air with a low dew point.

Supplies dry air with a low dew condensation point of -30°C or less.

Small and light without heater and electric control panel

Possible to check the outlet dew point with an indicator

(Self-regenerative style allows easy maintenance.)

**Outlet air flow rate
80 to 780 ℓ/min (ANR)**
